M.Sc. Comprehensive and Ph.D. Qualifying Examination

PART II

Saturday, August 24, 2019

1:00{5:00 PM

**General Instructions**

1. Each problem is to be done on a separate booklet. Label the front of each book with the identifying code letter you picked, the part number of the exam, and the number of the problem only; for example: A-I.6. Do not write your name or IIT ID number on any material handed in for grading.
2. Any numerical data not specified in a problem should be found in the table of constants at the front of the exam.
3. *DON'T PANIC*: It is not expected that each student will completely solve every problem. However, it is advisable to do a thorough job on those problems that you do solve.

## Physical Constants

Speed of light in vacuum	$c$	$=$	$2.998 \times 10^8$	m/s
Planck's constant	$h$	$=$	$6.626 \times 10^{-34}$	J s
	$\hbar$	$=$	$h/2\pi$	
		$=$	$1.055 \times 10^{-34}$	J s
		$=$	$6.582 \times 10^{-16}$	eV s
Permeability constant	$\mu_0$	$=$	$4\pi \times 10^{-7}$	N/A <sup>2</sup>
Permittivity constant	$\frac{1}{4\pi\epsilon_0}$	$=$	$8.988 \times 10^9$	N m <sup>2</sup> /C <sup>2</sup>
Fine structure constant		$=$	$\frac{e^2}{4\pi\epsilon_0\hbar c}$	
		$=$	$7.30 \times 10^{-3}$	$= \frac{1}{137}$
Gravitational constant	$G$	$=$	$6.67 \times 10^{-11}$	m <sup>3</sup> /s <sup>2</sup> kg
Avogadro's number	$N_A$	$=$	$6.023 \times 10^{23}$	mole <sup>-1</sup>
Boltzmann's constant	$k$	$=$	$1.381 \times 10^{-23}$	J/K
		$=$	$8.617 \times 10^{-5}$	eV/K
$kT$ at room temperature	$k \ 300 \text{ K}$	$=$	$0.0258$	eV
Universal gas constant	$R$	$=$	$8.314$	J/mole K
Stefan-Boltzmann constant		$=$	$5.67 \times 10^{-8}$	W/m <sup>2</sup> K <sup>4</sup>
Electron charge magnitude	$e$	$=$	$1.602 \times 10^{-19}$	C
Electron rest mass	$m_e$	$=$	$9.109 \times 10^{-31}$	kg
		$=$	$0.5110$	MeV/c <sup>2</sup>
Neutron rest mass	$m_n$	$=$	$1.675 \times 10^{-27}$	kg
		$=$	$939.6$	MeV/c <sup>2</sup>
Proton rest mass	$m_p$	$=$	$1.672 \times 10^{-27}$	kg
		$=$	$938.3$	MeV/c <sup>2</sup>
Deuteron rest mass	$m_d$	$=$	$3.343 \times 10^{-27}$	kg
		$=$	$1875.6$	MeV/c <sup>2</sup>
Atomic mass unit ( $C^{12} = 12$ )	$u$	$=$	$1.661 \times 10^{-27}$	kg
		$=$	$931.5$	MeV/c <sup>2</sup>
Mass of earth	$M_E$	$=$	$5.98 \times 10^{24}$	kg
Radius of earth	$R_E$	$=$	$6.37 \times 10^6$	m
Mass of sun	$M_S$	$=$	$1.99 \times 10^{30}$	kg
Radius of sun	$R_S$	$=$	$6.96 \times 10^8$	m
Gravitational acceleration at earth's surface	$g$	$=$	$9.81$	m/s <sup>2</sup>
Atmospheric pressure		$=$	$1.01 \times 10^5$	N/m <sup>2</sup>
Radius of earth's orbit		$=$	$1.50 \times 10^{11}$	m
Radius of moon's orbit		$=$	$3.84 \times 10^8$	m

## Conversion Factors

1 eV	$=$	$1.602 \times 10^{-19}$	J	1 J	$=$	$6.242 \times 10^{18}$	eV
1 A	$=$	$10^{-10}$	m	1 Fermi	$=$	$10^{-15}$	m
1 barn (b)	$=$	$10^{-28}$	m <sup>2</sup>	1 in	$=$	2.54	cm
0° Celsius	$=$	273.16	K	1 cal	$=$	4.19	J

**Problem 1:** A long straight piece of copper (Cu) wire with a cross sectional radius  $a$ , and electrical resistance  $R$ , is bent in half to form two long parallel wires of length  $l$  whose centers are a distance  $d$  apart.

- (a) Neglecting any flux within the wire itself, find the self inductance  $L$  of the wire in this configuration.
- (b) Assume a battery of emf  $\mathcal{E}$  is connected to the wire at time  $t = 0$ . Derive an expression for the current  $i(t)$ .

**Problem 2:** A point charge  $q$  is located at distances  $a$  and  $b$  from two perpendicular conducting half-planes, both at zero potential. Calculate the force acting on the charge  $q$ .

**Problem 3:** A surface of a non-conducting infinitely thin spherical shell of radius  $R$  is charged with the surface charge density  $\sigma(\theta) = \sigma_0 \cos \theta$ . Find the electrostatic potential inside and outside the shell.

*Hint:* Recall the Laplace operator in spherical system of coordinates:

$$\nabla^2 = \frac{1}{r^2} \frac{\partial}{\partial r} \left( r^2 \frac{\partial}{\partial r} \right) + \frac{1}{r^2 \sin \theta} \frac{\partial}{\partial \theta} \left( \sin \theta \frac{\partial}{\partial \theta} \right) + \frac{1}{r^2 \sin^2 \theta} \frac{\partial^2}{\partial \phi^2}$$

**Problem 6:** Using WKB (quasi-classical) approximation, estimate a transmission coefficient through a potential barrier:

$$U(x) = \begin{cases} 0 & x < -x_0 \\ U_0 - \frac{1}{2}m\omega^2 x^2 & -x_0 < x < x_0 \\ 0 & x > x_0 \end{cases}$$

for a particle of mass  $m$  and energy  $0 < E < U_0$ . To define  $x_0$ , use a continuity requirement for the potential energy  $U(x)$ .

**Problem 7:**
